

Challenge Security (CTFlearn)

Name: Rimas Alharbi

Months: June-July

Supervised: Eng. Fahad Alsadda And Ms. Reeman Alharbi

1. Overall Summary

This document provides a comprehensive summary of the cybersecurity challenges I am working on as part of my learning and skill development in the field of security. These challenges cover a wide range of attack and defense techniques that are essential. The primary goal is to strengthen my practical knowledge in identifying vulnerabilities, exploiting them responsibly in a controlled environment, and applying appropriate defensive measures. Each challenge is designed to simulate real-world scenarios using a safe and isolated lab environment, ensuring ethical practice. The outcomes of these exercises will enhance my ability to conduct security assessments and respond effectively to potential threats.

2. Study Progress

2.1 Forensics 101 Challenge (easy Level)

1. First, visit this site. "https://mega.nz/#!OHohCbTa!wbg60PARf4u6E6juuvK9-aDRe_bgEL937VO01EImM7c"
2. Download the image, create a file named CTF and rename for ex:
3. Write in terminal "cd CTF" Go into the folder named CTF that exists in the current directory.
4. Write in terminal "exiftool Forensics\ 101.jpeg" Use exiftool to extract metadata from the file named Forensics 101.jpeg
5. Write in terminal "strings Forensics\ 101.jpeg" Use strings Extract readable text (ASCII strings) from inside the image file Forensics 101.jpeg
6. Well done we have found the flag.

2.2 Taking LS Challenge (easy Level)

1. First, visit this site. https://mega.nz/#!mCgBjZgB!_FtmAm8s_mpsHr7KWv8GYUzhhThNn0l8cHMBi4fjQp8
2. Download the ZIP File.
3. Write in Terminal “unzip The\ Flag.zip” To open the ZIP file.
4. Write in Terminal “cd The\ Flag” Go into the folder named The Flag that exists in the current directory.
5. Write in Terminal “ls -la” to lists all files and folders, including hidden ones, with detailed information.
6. Take the file highlighted in a different color because it is the hidden file.
7. Repeat step 2 in ThePassword' file
8. Repeat step 2
9. Write in Terminal “cat ThePassword.txt” to Display the contents of a file in the terminal.
10. Well done we have found the password and go to The flag PDF and write the password.

2.3 What could this be? (Medium Level)

1. First, visit this site. https://mega.nz/#!SDQkUYQZ!b1Fu7iZ_wGiNX0aOjez95_74TYDCnLb3YSQfRzs0J-o
2. Download the what_can_this_be .txt.
3. So you can see it is a JSfuck
4. Go to <https://jsfuck.com/>
5. Copy and paste and run the text to the site to find out the flag.
6. The flag (flag{5uch_j4v4_5crip7_much_w0w})

Screenshot:

Figure 1

Figure 2

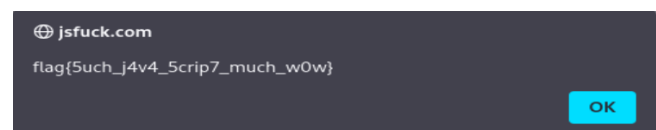

Figure 3

2.4 Substitution Cipher (Medium Level)

1. First, visit this site. https://mega.nz/#!iCBz2IIL!B7292dISx1PGXoWhd9oFLk2g0NFqGApBaltI_2Gsp9w
Figure it out for me, will ya?
2. Download the Substitution .txt.
3. You can go to this site to Analyze the speech and solve the problem yourself. I solved it myself, then I used a site to solve the codes because of the time like <https://legacy.cryptool.org/en/cto/frequency-analysis>.
4. The site that solves <https://www.guballa.de/substitution-solver>
5. Copy and paste and run the text to the site to find out the flag.
6. The flag it is (flag{IFONLYMODERNCRYPTOWASLIKETHIS})

Screenshot:

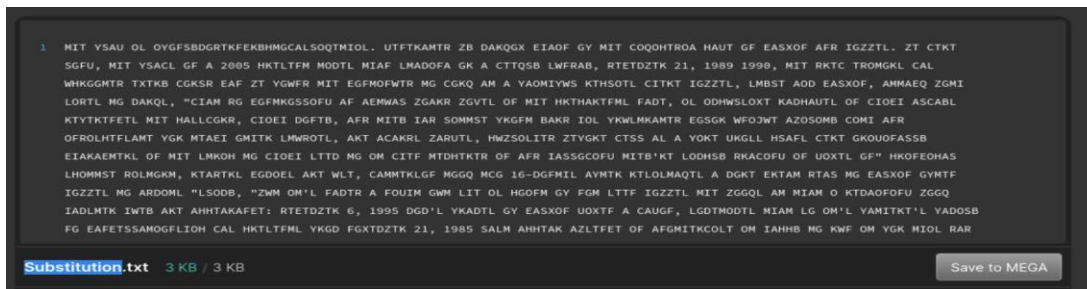

Figure 1

Substitution Solver

This tool solves monoalphabetic substitution ciphers, also known as cryptograms. These are ciphers where each letter of the clear text is replaced by a corresponding letter of the cipher alphabet.

As an example here is an English cryptogram this tool can solve:

```
Rbo rpkrtigo vcrb buucja wj kloj hcjd, km sktpgo, cq rbwr loklgo
vcgg cjqrkj kj shkja wqkja wjd rpycja rk ltr rbcjaq cj cr.
-- Roppy Lpwrborr
```

A Python implementation of this breaker is provided on [GitLab](#).

If you want to break a polyalphabetic cipher instead try the [Vigenère Solver](#).

Figure 2

Input

Cipher Text *

Copy Please fill out this field.

Result

Key	abcdefghijklmnopqrstuvwxyz	This clear text ...
	aywmcnophqrstjizkdllegxuvfb	... maps to this cipher text

THE FLAG IS IFONLYMODERNCRYPTOWASLIKETHIS. GENERATED BY MARKOV CHAIN OF THE WIKIPEDIA PAGE ON CALVIN AND HOBBS. BE WERE LONG, THE FLAWS ON A 2005 PRESENT TIMES THAN STAMINA OR A WEEKLY SUNDAY, DECEMBER 21, 1989 1990, THE DREW EDITORS WAS UPROOTED EVERY WORLD CAN BE FOUND THE CONTINUED TO WORK AT A FAITHFUL REPLIES WHERE HOBBS, STYLE AIM CALVIN, ATTACK BOTH SIDES TO MARKS, "WHAT DO CONTROLLING AN ACTUAL BOARD BOXES IN THE PREPARENTS NAME, IS IMPULSIVE RAMPAGES IN WHICH ALWAYS

2.5 The adventures of Boris Ivanov. Part 1. (Medium Level)

1. First, visit this site. https://mega.nz/#!HfAHmKQb!zg6EPqfwes1bBDCjx7-ZFR_000-GtGg2Mrn56l5LCkE
2. Download the Boris_Ivanov_1.jpg.
3. Write in Terminal “sudo -s” starts a new shell with root privileges, allowing you to run commands as the root user without switching users completely.
4. Write in Terminal “cd Downloads” Change into the Downloads directory from the current location.
5. Write in Terminal “ls” List the files and folders in the current directory.
6. Write in Terminal “file Boris_Ivanov_1.jpg” tell me the type of the file.
7. Write in Terminal “java -jar stegsolve.jar” To Run the StegSolve tool using Java.
8. Open the Image Boris_Ivanov_1.jpg from File.
9. And go to analyse and go to stereogram solver and change the offset to 102.

Figure 7

2.7 Calculat3 M3. (Hard Level)

1. First, visit this site. <http://web.ctflearn.com/web7/>.
2. I right-clicked anywhere on the page and chose Inspect to open Developer Tools.
3. I entered a basic expression in the calculator, for example: 9 * 9, then clicked the "=" button to calculate.
4. I went to the Network tab to monitor requests sent by the calculator.
5. I looked at the first network request that appeared in the list after I clicked "="
6. I clicked on that request to see the expression, then go to header then resend and go to the body.
7. I modified the expression to: expression=;ls — trying to test for command injection.
8. I clicked on send the expression and clicked the new state and go to the response and see the flag.

2.8 Corrupted File. (Hard Level)

1. First, visit this site. https://mega.nz/#!OKxByZyT!vaabCJRG5D9zAUp7drTekcA5pszu67r_TbQMtxEzqGE
2. Download the unopenable .gif.
3. Write in Terminal “file unopenable.gif” tell me the type of the file.
4. Write in Terminal “hexdump -C unopenable.gif | head -n 5” This shows the first few lines of the file in hex. The first 6 bytes of a real .gif file.
5. Write in Terminal “echo -ne '\x47\x49\x46\x38\x39\x61' > fixed.gif” This creates a new file called fixed.gif and writes the correct .gif header to it.
6. Write in Terminal “tail -c +2 unopenable.gif >> fixed.gif” corrupted file starting from the second byte and appends it to the new file fixed.gif.
7. Write in Terminal “identify fixed.gif” uses ImageMagick to show detailed information about the image.
8. Write in Terminal “convert fixed.gif frames_%02d.png” split the animated GIF into separate PNG images.
9. Go to Downloads file and see the image, see the text in image, go to the <https://www.base64decode.org/>
10. Decode the text “ZmxhZ3tnMWZfb3JfajFmfq==”
11. See the flag.
